DAY_09-LINUX-BASICS

THEORY (answer all 20 questions in your own words):

1. What is Linux?
    - Linux is a open source operating-system.
    - Used by Servers, cloud system, network devices and cybersecurity environments.

2. What is a Linux distribution?
    - Distribution Packet: combination of linux kernel, packet manger, system utilities, applications and desktop environment.

3. Name four Linux distributions.
    - Ubuntu
    - Kali Linux
    - Debian
    - Red Hat

4. What is Kali Linux?
    - It's a linux server available open source, debian based OS designed for ethical hackers, digital forensics and penetration testing.

5. What is a terminal?
    - Instead of using the graphical user interface we use commands in an OS to control the computer.

6. What does the whoami command do: Displays the Username

7. What does hostname display: Displays the Hostname

8. What does pwd mean: Print working directory [Shows current directory]

9. What is the purpose of ls: Listing the files in the current directory.

10. Explain the difference between ls, ls -l and ls -a.
    - ls – Listing
    - ls -l – Displays detailed listing involving owner, permission, file size and so on…
    - ls -a – Displays the hidden files

11. What does cd do: Change directory

12. What does cd .. do: Move one step above to the parrent directory

13. What does cd ~ do: Goes to home directory

DAY_09-LINUX-BASICS

14. What does cd / do: Goes to file system root

15. What is the Linux root directory: /

16. What is the difference between the root directory and the root user?
    - Root Directory: / [A place]
    - Top of the tree root: Administrative Privileged User [A user].

17. What is an absolute path?
    - An absolute path displays always from the filesystem root.

18. What is a relative path?
    - It displays the path on depending on where it currently stands.

19. How are hidden Linux files commonly identified?
    - Hidden Linux files commonly identifed as dot file (.).
    - (.) placed at the beginning of the file.

20. Why are Linux skills important for cybersecurity?
    - Linux powers most of the world's servers, cloud infrastructure, and security tools, providing direct, transparent access to system internals.

PRACTICAL SCREENSHOTS (from your own Linux system/VM):

whoami · hostname · pwd · ls · ls -l · ls -a · cd / · cd ~
